
hidden labels of A go to the evaluator only; they never enter the loop
1 Split the site
2 Predict
TabPFN + graph
ln q_c and $H(x)$ everywhere
3 Stop rule met?
4 stability and error signals
≥ 9 CPTs, 2 rounds in a row
yes
no
6 Audit on A
pass / false early stop /
no early stop, vs full plan
5 Reveal 2 CPTs
add the measured curves
to the site context
4 Select batch
Adaptive: $0.5U + 0.3D + 0.2d$
Sequential: maximin
7 Economics
CPTs, field + wait days
$\alpha = 1$, net owner benefit
Online loop: sees coordinates and revealed CPTs only
S_0 initial (≥ 5)
C candidate pool
A hidden audit (~20%)
Full plan $N_{full} = |S_0 \cup C|$
